

Electric Vehicle Charging Station Trainer, Wallbox, Level 2

Installation Technology and Industrial Maintenance

Electric Vehicle Charging Station Trainer, Wallbox, Level 2

Whether at home, at work, in retail, in underground parking garages or in the hospitality industry: wallboxes are a safe and reliable solution for charging electric vehicles.

The electrical safety of the charging infrastructure must be checked by the operator at regular intervals. This mobile training device is used to train technicians on how to install, check and commission such a hard-wired charging infrastructure or how to carry out diagnostics and troubleshooting.

Order no. C05127-4Q57

Training contents

- Design and operation of charging infrastructure networks
- Various types of charging columns and connection cables
- Energy and power requirements for charging systems
- Load management and assessing the energy and power requirements
- Installation in compliance with technical standards and legal regulations
- Protective equipment of charging stations
- Testing and maintenance according to national regulations
- Start/stop charging w/RFID Card, or NFC enabled smart watch/phone
- Safety measures to prevent electric shock or injury
- Inspection and testing of electric charging stations
